Art Unit: 2666

1. Claim 15 is objected to under 37 C.F.R. 1.75 because of the following formalities:

In claim 15 line 2 , " a packets" should be changed to --- a packet ---.

2. Claims 15-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

in claim 15 line 16 and line 19, " the interface " lacks antecedent basis because it is not known what " the interface" is referring to. Similar problem exists in claim 16.

3. Claims 15-16 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

For claims 15-16, the prior art fails to teach a combination of :

a memory which stores new connection identifiers;

a controller which converts connection identifiers of received packets to the

new connection identifiers stored in the memory;

wherein a control signal is communicated between the originating

communication apparatus and the destination communication apparatus for determining

a connection through which the packet is to be transferred, and determining a new

connection identifier corresponding to the connection, and

wherein when the packet is received by the interface of the originating

communication apparatus, a connection identifier of the received packet is converted to the new connection identifier stored in the memory and the received packet is output to the destination communication apparatus.

4. Claim 15 would be allowable if rewritten to overcome the objection to under 37 C.F.R 1.75.
